NUMERICAL ANSWERS – CHIEF (Exam only, EXCEPT RESITS, published to students)

Question		Numerical Answer
1.	a)	$C_L = 0.374$ $V_T = 251.3$ m/s
	b)	$\Gamma = 320.7$ m^2/s
	c)	Infinite $w(y) = \frac{-\Gamma}{2\pi(y - y_L + s)} + \frac{\Gamma}{2\pi(y - y_L - s)}$
	d)	$\Delta T = -9262$N 8.6% reduction.
2.	a)	$C_L/C_D = 14.3$ $\gamma_{glide} = -4.0^o$ $V_E = 44.0$ m/s
	b)	$S_T = 1.97$ m^2
	c)	$S_P = 2.63$ m^2

ASSESSMENT CHECKLIST 2

MARKS FINALISATION – CHIEF AND PROOF

We confirm that:

- The marking and checking of the above assessment have been completed in accordance with the Manual of Assessment Procedures.
- The marks conform to the advertised marks matrix, Senate Marking Scale and appropriate UG/MScT Level descriptors.
- Marks have been entered onto the spreadsheet by the Chief, moderated by the Proof and checked by the Checker.

Chief: ____David Sims-Williams_____ **Date:** __2/6/2020_____

Proof: _____GRANT INGRAM _____ **Date:** _29-05-2020

Assessment Average:

Are marks within the expected bands for this level? Yes □ No X
(NOT required for resit examinations and examinations with less than five submissions)

Chief's Report (Exams and Coursework, published to students and external examiners – NOT required for resit examinations)

- Brief discussion (if necessary) as to why marks are outside expected range.

Most of questions are calculations with numerical answers and, under the exam conditions of 2019/2020, many candidates were able to get almost all of the answers correct.

Cohort feedback:

Most candidates performed well on the paper.

The areas that candidates found most challenging were:
Q1b)
Recognising that, from the point of the following aircraft the vortices of the upstream aircraft appear almost infinite. Looking laterally from the perspective of the downstream aircraft the vortices sweep from 90 degrees downstream to 88.6 degrees upstream – this is much closer to +-90deg than to 0-90 degrees. Some candidates described one approach but used the opposite approach in their calculation, suggesting some lack of understanding.

Q1c)
This calculation required an integral to get the effect of upwash at each position along the wing span and this took some care to get right.

Q2c)
Many candidates did well on this – but the key was to recognise the effect of the dihedral on the incidence (from the point of view of the 2D profile) AS WELL AS the effect of direction of lift and its projection.
